

Time of Year and EAB Treatment

Product	Time of Year ¹	Other Considerations
Imidacloprid	Spring (early April to mid-May) Fall (October to November)	Spring treatments more effective than those in fall No more than 128" DBH of tree can be treated per acre at 1x rate
Dinotefuran	Spring (early May to mid-June)	Soil injection or trunk sprays equally effective up to 12 " DBH No more than 104" DBH of tree can be treated per acre
Emamectin benzoate	Bud-break to end of June Late August (after heat wave) until leaves begin fall color	Spring applications kill adults before eggs are laid this year. Fall applications kill next year's adult beetles Trees w/DBH < 8" require special training and injection procedures

¹Actual months vary with latitude. Trees must be actively transpiring for effective uptake
